TO WHOMSOEVER IT MAY CONCERN

This is to certify that M/s.HVAC Enersave Solutions, Chennai are the HVAC Consultants for our Moulding shop floor climate control system. They have completed the design and implementation of the system and the same is working satisfactorily. Considering the fact that the shop floor roof structure is old and also due to space restriction inside the conditioned area, all the indoor and outdoor units are kept outside the building. The system is designed with dedicated double skin thermal break air handling units connected to condensing units. Generally both cold supply air and hot return air is fed and collected at ceiling level whereas in this system cold air is supplied at 600 mm height from the finished floor level and return is collected at 10 feet level due to which comfort conditions are met even at higher grill temperature thus saving energy considerably. We are satisfied with the overall system design.

With best regards

KOSTAL NTTF Automotive India Pvt. Ltd.
